

Environmental Pollution

Mohammed Sassy, Hadeel Saleh & Eyad Ibrahim
1st Year PharmD Students (2017/2018)

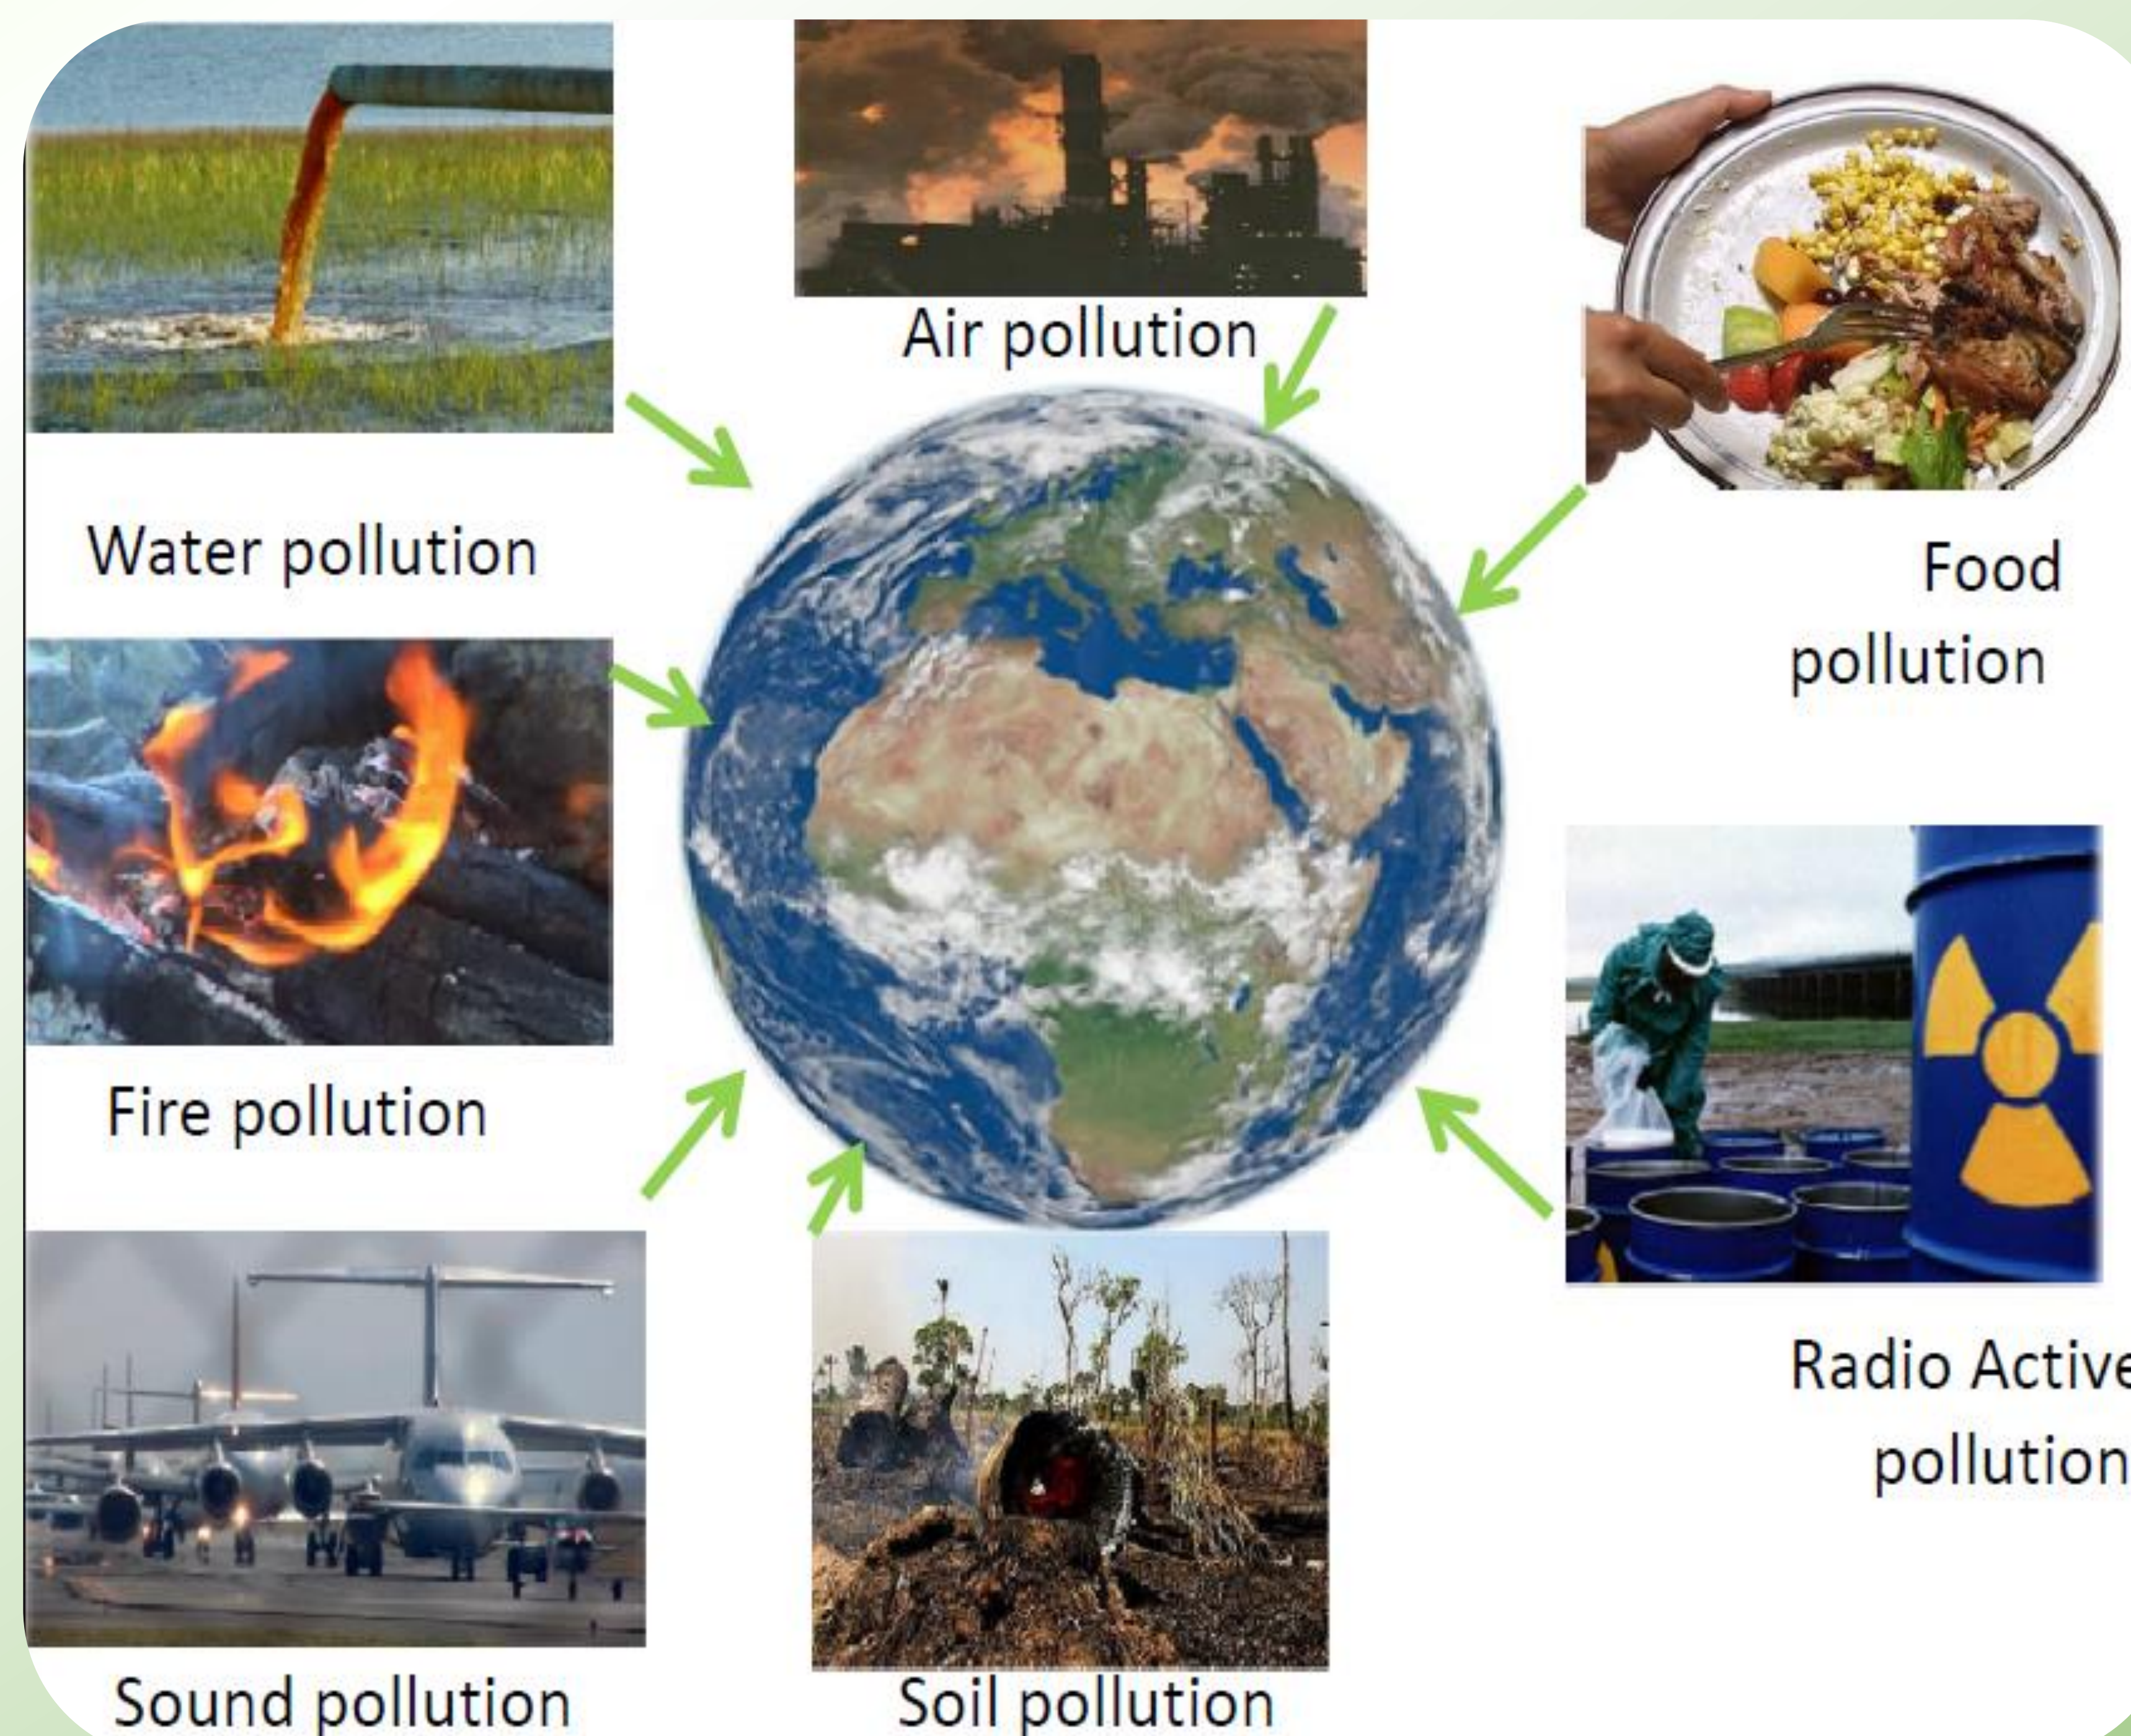

كلية الصيدلة
Faculty of Pharmacy

Introduction: One of the greatest problems that world is facing today is the environmental pollution, which is increasing with every passing year and causing grave and irreparable damage to the earth.

What is pollution?

What are its causes?

What is Recycle?

ADVANTAGE OF RECYCLE

- 1 CONSERVES NATURAL RESOURCES
- 2 REDUCES THE NEED FOR LANDFILLS
- 3 PREVENTS POLLUTION
- 4 SAVES ENERGY
- 5 CREATES JOBS

Summary: Pollution must be taken seriously, because it has a negative impact on the natural elements that are an absolute need for life to be present on the ground, such as water and air. We can identify several types of pollution on the ground: air pollution, water pollution and soil pollution.
