N.O.R.A
(Non Obvious
Relationship Awareness)

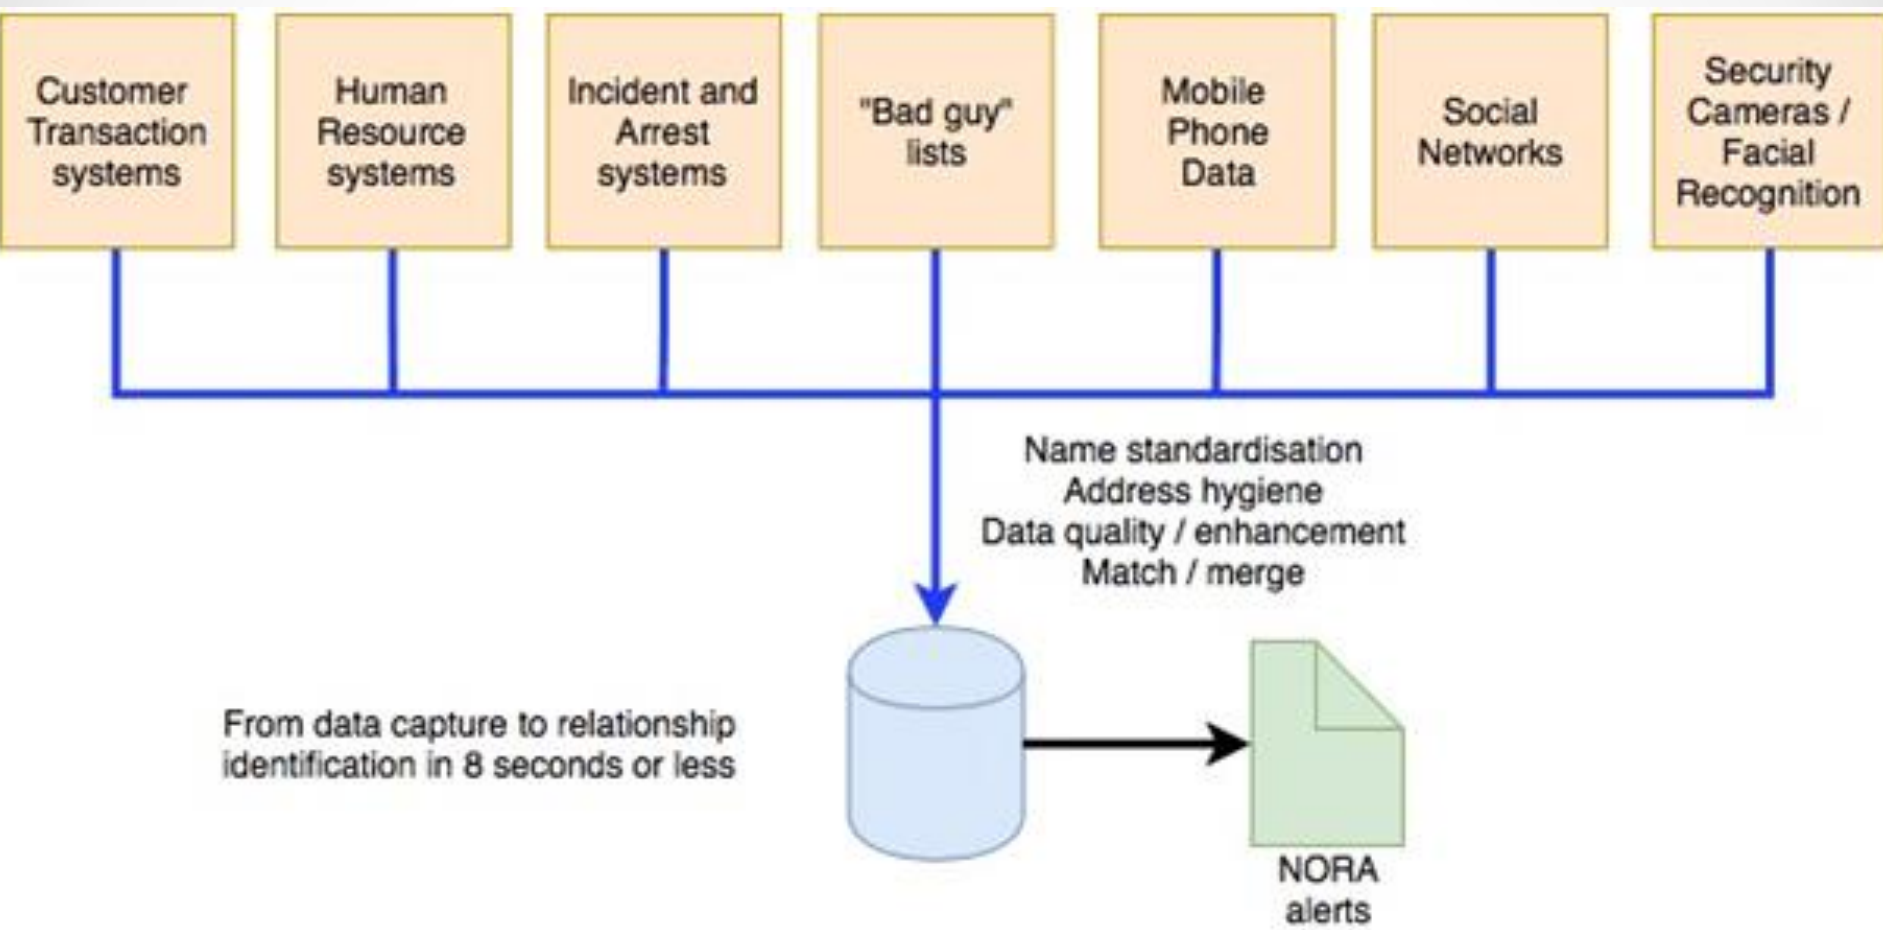

History of NORA

What is N.O.R.A.?

- System that mines data from data resources that determines non-obvious relations between people and organization.

How N.O.R.A works?

Conclusion

- Currently an increasing amount of data mining technology are being applied in the real world. Besides spam filtration and virtual assistants and data mining are also used to improve national security.
- NORA is a system which draws 'non-obvious' conclusions from a variety of databases.
